Cell-phone number: +380 67 706 25 12

EDUCATION

Korea Advanced Institute of Science and Technology (KAIST) Aug 2016
Industrial Design and Engineering

Taras Shevchenko National University of Kyiv Sep 2010 - Aug 2011
Faculty of Radiophysics, Electronics and Computer Systems

PROFESSIONAL EXPERIENCE

National University of Water and Environmental Engineering
Rivne, Ukraine

Lead Server Systems Engineer, IT Department May 2025

- Administer, configure, and maintain enterprise server hardware and specialized infrastructure
- Deploy, monitor, and optimize complex server structures, runtime environments, and software libraries
- Manage network routing, secure communication channels, protocols, and access control policies
- Conduct routine maintenance, hardware diagnostics, and preventive measures to prevent downtime
- Architect and plan scalability of university-wide server systems and IT infrastructure

IoT Energy Management System
Rivne, Ukraine

Founder Aug 2024 - Aug 2026

- Architected end-to-end software platform and guided core implementation
- Led IoT hardware lifecycle from early prototyping to finished production
- Drove business development, securing key pilot clients and early user base
- Prepared codebase, cloud infrastructure, and technical assets for exit
- Successfully completed full startup acquisition

Department of Economic Development
Rivne, Ukraine

R&D Consultant Apr 2024 - Aug 2024

- Designed a system to track energy usage and efficiency of government buildings
- Developed real-time monitoring and forecasting tools for cost-saving strategies
- Enabled data-driven analysis to optimize energy consumption and reduce expenses
- Provided a direct communication channel for users to access investment opportunities
- Assisted in implementing technology solutions for sustainable urban development

rvParts
Zdolbuniv, Ukraine

Chief Technology Officer (CTO) Oct 2021 - Apr 2023

- Fully automated the car disassembly workflow, from intake to sales
- Optimized inventory and warehouse with auto-labeling and tracking with IoT
- Integrated multi-market auto-listing (OLX, Prom, Ria, Autopro, etc)
- Connected local postal APIs (Nova Poshta, Delivery) and e-receipts (Checkbox)
- Implemented AI-powered business assistant

Globex Post Lviv, Ukraine
Full-Stack Developer Jan 2020 - Jul 2021

- Designed custom API system
- Prepared the system for a smooth transition from Django 1.6 to Django 3.+
- Optimized project architecture as well as database data structure
- Added new functionality, maintained and improved existing code
- Cleaned up deprecated/abundant code

Ukraine Express Delaware, USA
Full-Stack Developer Aug 2019 - Jan 2020

- Developed a declaration management system using Django
- Embedded system API using Django Rest Framework
- Created a client for automatic document generation and printing
- Configured and maintained system server on DigitalOcean
- Assisted in creating parsers for automatic email parsing system

Freelance Rivne, Ukraine
Full-Stack Developer Jul 2017 - Aug 2019

- Completed multiple quantitative data researches and analysis using Python programming language
- Designed custom independent and meshed REST APIs using Django Web Framework
- Mastered home automation IoT system integrated with artificial intelligence
- Cultivated an automated Initial Coin Offering management system on blockchain technology

Microsoft, STEM Artificial Intelligence Bootcamp Athenes, Greece
Teacher Aug 2018

- Taught Microsoft Azure to the bootcamp participants
- Practiced using Azure services for AI development
- Integrated AI with MicroBit controller to create a smart robot

Startup (In SK Global Creative Economy Innovation) Seoul, South Korea
Full-Stack Developer Aug 2016 - Jul 2017

- Conducted UX/UI research (strategy & content, wireframing & prototyping, execution & analytics)
- Partook in development of Android application
- Acquainted with machine learning algorithms for commercial and noncommercial use cases
- Configured Amazon AWS services including compute, storage, database, security, data integration, networking and content delivery, management tools

KAIST, My Design Lab Daejeon, South Korea
Researcher Dec 2014 - Aug 2015

- Devised "Automatized Wall Painting Drone" to implement painting works on skyscrapers
- Researched and developed high altitude painting algorithms
- Worked with 3D modeling and printing software
- Ensured Arduino based Drone-Computer communication with XBee and Python

SKILLS

- **Languages:** Python, JavaScript/TypeScript, Go, Rust, C/C++, Bash/Shell
- **Backend & APIs:** Django, FastAPI, Node.js/Express, Next.js, RESTful APIs, GraphQL, gRPC, WebSockets
- **Cloud & DevOps:** Docker, Kubernetes, Linux/Unix, Terraform, AWS, GCP, Azure, CI/CD pipelines
- **Databases & Caching:** PostgreSQL, TimescaleDB, MySQL, Redis, MongoDB, Apache Kafka
- **IoT & Hardware:** MQTT, Modbus (RTU/TCP), Zigbee, LoRaWAN, ESP32, Raspberry Pi, Telemetry Pipelines
- **AI & Data Engineering:** PyTorch, TensorFlow, Scikit-learn, LangChain, Pandas, Apache Spark, Airflow
- **Networking & Security:** Zero Trust Architecture, WireGuard/VPNs, Firewalls, OAuth2, JWT
- **Tools & Architecture:** Git, Microservices, Event-Driven Architecture, Service/Selector Pattern, 3D Prototyping
